

TEC-MED project - 3rd International Newsletter

TEC-MED

The 3rd newsletter reports on the progress and first results of the piloting phase of the TEC-MED Model

The TEC-MED project works on a pioneering care model for elderly people with dependency and/or at risk of social exclusion. It takes place in 6 countries: Spain, Italy, Greece, Lebanon, Tunisia and Egypt, with 9 partners and 6 associated entities.

This project aims to respond to the challenge represented by the doubling of the population over 60 years and the increasing burden of care. Therefore, it focuses on an integrated cross-cultural model that is person-centered, with the goal of promoting good practices in socio-health care in the countries of the Mediterranean Basin. In this sense, the TECMED project aims to foster social inclusion, gender equity and struggle against poverty, taking into account socioeconomic, cultural and ethical factors to encourage the comprehensive health of elderly people.

This last year the pilot phase of the project is being carried out. In this phase, all the participating countries have incorporated Final Beneficiaries, Caregivers and Training Agents into their pilot, reaching the suitable data to validate the TEC-MED model.

The TEC-MED interventions aim at building the capacity of older persons and their caregivers and improving their quality of life through a holistic approach to care and service delivery

IDRAAC, the Institute for Development, Research, Defense, and Applied Attention, the main TEC-MED partner in Lebanon, started the pilot phase in Lebanon in April 2022. The first experiences were very enriching to the training agents, who after intensive training are now capable of carrying out the assessments as they were exposed to this new model of care, platforms, and resources that are most importantly adapted to the local context and language.
